

Meet Manager — Quick Start Workflow

Prerequisites

- SPLASH Meet Manager 11
 - Meet Manager App running (Docker)
 - Admin access to the app (admin PIN)
-

Step 1 — Admin: Set Up Clubs and Athletes

1. Log in to Meet Manager App as **Admin**
 2. In the **Admin** page, upload a Lenex entries .1xf file (previous meet or master list) to import clubs, athletes, and best times
 3. Review the club list; add or remove clubs as needed
 4. Designate the **organizer club** under *Set Meet Organizer*
-

Step 2 — Organizer: Get the Meet Template

1. Log in as the **Organizer** (club designated by Admin)
 2. In the **Organizer** page, click **Download Meet Template (.smb)**
 3. Open the downloaded .smb file in SPLASH — this restores the full previous meet structure, including **combined events** (defined combined events are not preserved in .1xf exports)
 4. In SPLASH, update the meet: dates, sessions, events, fees, and any other details
 5. **Review and adapt the combined events** to match this season's meet definitions — combined event scoring rules are stored only in the .smb and must be manually updated each season
-

SPLASH Configuration Checklist (before exporting the invitation)

Before exporting the invitation .1xf from SPLASH, verify that the following fields are set. Missing or incorrect values cause silent failures on import — wrong fees, events without age groups, best times that never fill in, etc.

SPLASH setting	What breaks if missing
Meet name	Displayed throughout the UI and stored in app config
Pool type (LCM / SCM)	Defaults to LCM; wrong value means entry times show in the wrong column
Masters flag	Masters events and category are hidden for all athletes
Fee types and amounts	Invoice items are missing or zero
Fee currency	Invoice currency defaults to nothing
Per-event fees on timing events	Per-entry invoice lines are zero
Age groups on every event	Age category dropdown has no valid options for the event
Combined event definitions	Scoring for combined events (e.g. rescue medley, combined lifesaving) will be wrong or missing if not adapted to the current meet

Step 3 — Export the Meet Invitation from SPLASH

1. In SPLASH, go to **Transfers** → **Export invitation...**
 2. Save the resulting .1xf file (this is your updated meet structure)
-

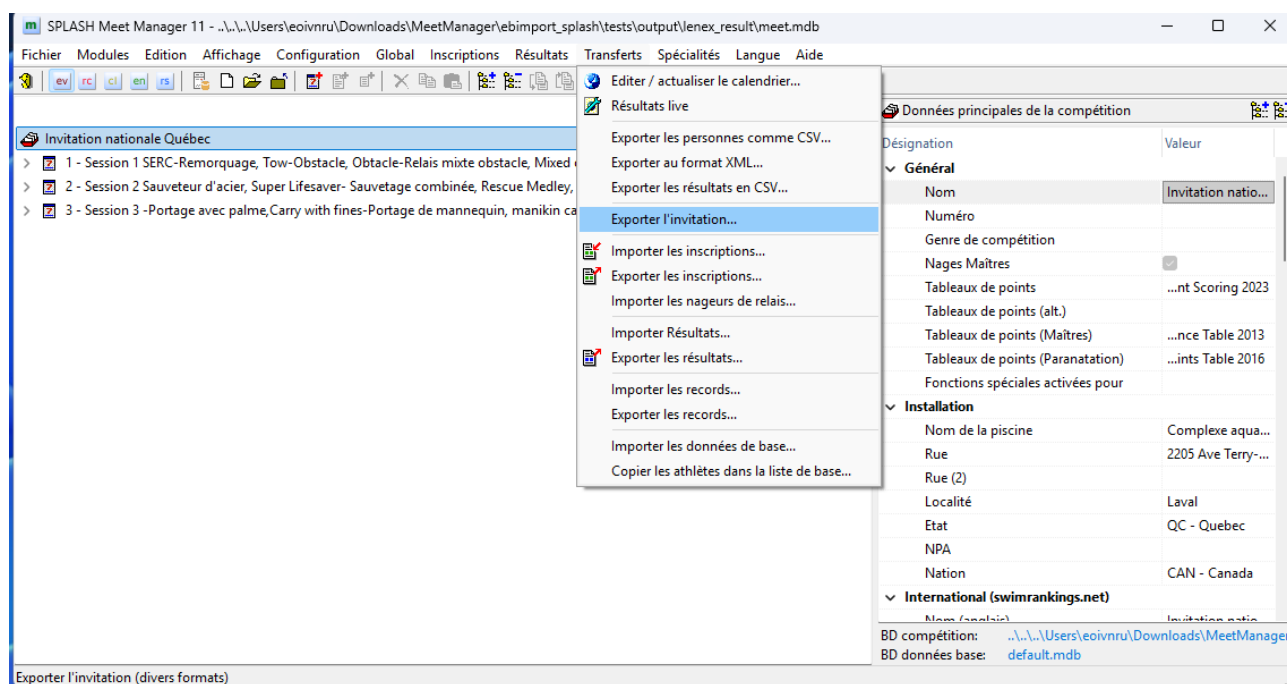

Figure 1: Export invitation from SPLASH

Step 4 — Organizer: Upload the Meet Structure

1. In the **Organizer** page, click **Upload Meet Structure** and select the .lxf exported in Step 3
2. The app loads all events, pool size, masters flag, and fees
3. The **Fee Summary** box will show the loaded meet-level and per-event fees

Step 5 — Organizer: Set the Entry Closure Date

1. In the **Organizer** page, set the **Entry closure date**
2. Club coaches can register until this date; the invite list greys out after closure

Step 6 — Organizer: Send Invitations to Club Coaches

1. In the **Organizer** page, go to **Team Invites**
2. Select the clubs to invite (use the checkboxes or select all)
3. Click **Send Invitation** — each coach receives an email with a one-time secure link to retrieve their club PIN

Alternative — self-invite: Coaches can also request their own invitation without waiting for the organizer. From the login page, click **Request an Invitation**, select their club, confirm the email address on file, and click **Send Invitation**. This triggers the same email and secret-link flow. The club must have an email address configured in the Admin page.

Step 7 — Club Coaches Register Athletes

1. Coach clicks the PIN link in the invitation email to reveal their club PIN
2. Coach logs in with the PIN
3. Select an athlete → Registration page opens
4. Check events to register; select category (15-18 / Open / Masters)
5. Best times (50m and 25m) are shown read-only
6. Entry time is pre-filled from the best time matching the meet's pool size; adjust if needed

Épreuves individuelles

✓	Épreuve	Catégorie	MT 50m	MT 25m	Temps d'inscription
☐	100 m Portage Mannequin palmes/Manikin Carry Fins	15-18	1:46.39		
☐	50 m Portage du mannequin plein/Manikin Carry	15-18			
☐	100 m Sauvetage combiné/Rescue Medley	15-18			
☒	200 m Sauveteur d'acier/Super Lifesaver	15-18	3:04.04		3:04.04
☐	200 m Nage avec obstacles/Obstacle Swim	15-18			
☐	100 m Remorquage mannequin palmes/Manikin Tow Fins	15-18			
☐	100 m Nage avec obstacles/Obstacle Swim	Masters			

Relais

✓	Épreuve	Catégorie	Temps d'inscription	Équipiers
☐	2x 50 m Relais mixte portage/Mixed Carry Relay (4x)	15-18		
☐	4 x 50 m Relais obstacle mixte/Mixed Obstacle Relay (4x)	15-18		
☐	12 m Lancer de la corde/Line Throw (2x)	15-18		
☐	4 x 50 Relais mixte sauve combiné/Mixed Medley Re (4x)	15-18		

Figure 2: Edit entries

Step 8 — Organizer: Export Registrations

1. After the closure date, in the **Organizer** page click **Download bundle (.zip)**
2. The zip contains the registrations .1xf and SPLASH simulation helper scripts

Step 9 — Import Entries into SPLASH

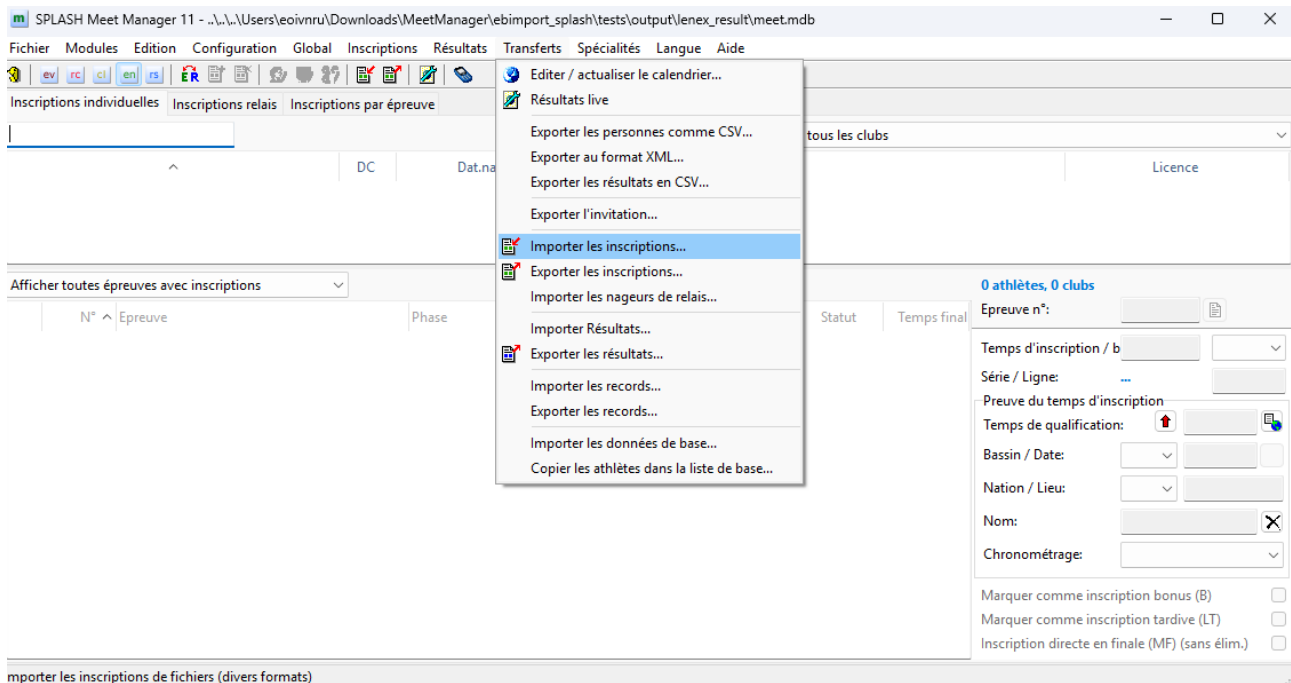

Figure 3: Import entries into SPLASH

1. In SPLASH, go to **Transferts** → **Import entries...**
2. Select the .1xf from inside the downloaded zip
3. All athletes, clubs, and entry times are imported and ready for race day

Step 10 — After the Meet: Export Results from SPLASH

1. After the competition, in SPLASH go to **Transferts** → **Export results...**
2. Save the results .1xf file

Step 11 — Admin: Upload Results to Update Best Times

1. In the **Admin** page, upload the results .1xf under **Upload Lenex (.1xf)**
2. Best times are updated (fastest of entry time vs. result, per pool size) and stamped with the meet date
3. These times will pre-fill entry times for the next meet; times older than 18 months are automatically discarded

Step 12 — Admin: Export the Updated Entries File

1. In the **Data Management** page, click **Download entries (.1xf)**
2. Save this file — use it as the seed for the next meet (Step 1)

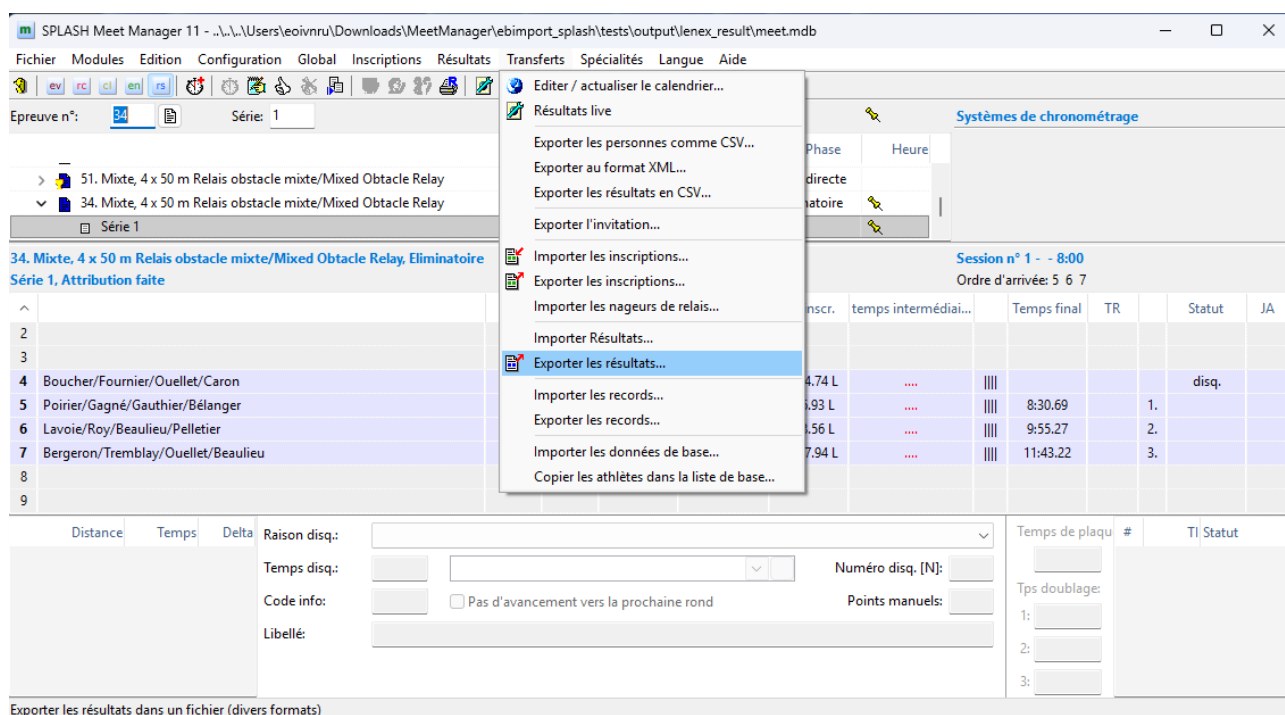

Figure 4: Export results from SPLASH

Summary

Step	Action	Who	Tool
1	Import clubs & athletes; designate organizer	Admin	Meet Manager App
2	Download meet template (.smb); adapt combined events in SPLASH	Organizer	Meet Manager App + SPLASH
3	Update meet in SPLASH; export invitation	Organizer	SPLASH
4	Upload meet structure	Organizer	Meet Manager App
5	Set closure date	Organizer	Meet Manager App
6	Send invitations	Organizer	Meet Manager App
7	Register athletes	Club coaches	Meet Manager App
8	Export registrations bundle (.zip)	Organizer	Meet Manager App
9	Import entries	Organizer	SPLASH
10	Export results	—	SPLASH
11	Upload results / update best times	Admin	Meet Manager App
12	Export updated entries file	Admin	Meet Manager App

Supplementary Workflow — Consolidating Results from Multiple Past Meets

Use this workflow when you have results or entries files from several past meets that were run with different SPLASH meet structures. Because each meet file may define its own event IDs (IDxxx) and club codes, importing multiple files can produce duplicate clubs and mismatched style UUIDs. The **Data Management** page resolves both.

Context

Each SPLASH meet structure assigns its own internal event IDs to disciplines (e.g., ID001 in one meet file may represent the 50m Freestyle but ID001 in another file may represent a different event). Similarly, a club that

appears as ASPN in one file may appear as ASP-N or ASP in another. Importing both files without reconciling these differences results in duplicate clubs and fragmented best times.

Step A — Import Each Past Meet File

For each past meet (entries or results .lxf):

1. Log in as **Admin**
2. In the **Admin** page, upload the .lxf file under **Upload Lenex (.lxf)**
3. The app imports new clubs, athletes, and best times; existing records are updated if a matching license number is found
4. Repeat for every past meet file you want to consolidate

After all uploads, the database will contain all athletes and best times, but may have duplicate clubs and inconsistent style UUIDs.

Step B — Merge Duplicate Clubs

Different meet files often encode the same club under slightly different codes or names. Use club merging to unify them:

1. In the **Data Management** page, go to the **Merge Clubs** section
2. The list shows all clubs currently in the database
3. For each duplicate pair, select the **source club** (the one to eliminate) and the **target club** (the canonical record to keep)
4. Click **Merge** — all athletes and registrations from the source club are re-parented to the target club, and the source club is deleted
5. Repeat until no duplicates remain

Tip: Start with the most obvious duplicates (same name, different code). Club codes from older or non-standard meet files are the most common source of duplication.

Step C — Merge Diverging Style UUIDs

Each SPLASH meet file defines its own style UUIDs for disciplines (e.g., the same discipline may appear as ID001 in one file and ID045 in another). Best times are stored per style UUID, so a single athlete may end up with two separate best-time records for the same discipline.

1. In the **Data Management** page, go to the **Merge Styles** section
2. The list shows all distinct style UUIDs found in the database, with their associated style names
3. For each pair of UUIDs that represent the same discipline, select the **source UUID** (to eliminate) and the **target UUID** (canonical — typically the one used by the most recent or most complete meet file)
4. Click **Merge** — best times under the source UUID are merged into the target UUID, keeping the faster time per pool size (LCM / SCM) for each athlete; the source UUID records are removed
5. Repeat for all diverging style pairs

Tip: Cross-reference the style names shown in the list with your SPLASH event definitions to confirm you are merging the correct disciplines.

Step D — Export the Consolidated Entries File

Once clubs and styles are fully reconciled:

1. In the **Data Management** page, click **Download entries (.lxf)**
2. Save this file — it is a clean Lenex export of all clubs, athletes, and consolidated best times
3. Use this file as the seed for the next meet (Step 1 of the main workflow)

Summary

Step	Action	Who	Tool
A	Upload each past meet entries/results file	Admin	Meet Manager App
B	Merge duplicate clubs	Admin	Meet Manager App — Data Management

Step	Action	Who	Tool
C	Merge diverging style UUIDs	Admin	Meet Manager App — Data Management
D	Export consolidated entries file	Admin	Meet Manager App — Data Management
